| magnetic properties                   |             |                 |                       |      |      |
|---------------------------------------|-------------|-----------------|-----------------------|------|------|
| Remanence 20°C                        | Br min      | 1.170           | Т                     | 11.7 | kG   |
|                                       | Br nom      | 1.220           | T                     | 12.2 | kG   |
| Coercitivity 20°C                     | HcB min     | 868             | kA/m                  | 10.9 | kOe  |
|                                       | HcB nom     | 930             | kA/m                  | 11.7 | kOe  |
| Intrinsic Coercitivity 20°C           | HcJ min     | 1353            | kA/m                  | 17.0 | kOe  |
|                                       | HcJ nom     | 1360            | kA/m                  | 17.1 | kOe  |
| Maximum Energy Product 20°C           | BH max, min | 263             | kJ/m³                 | 33.0 | MG0e |
|                                       | BH max, nom | 279             | kJ/m³                 | 35.1 | MGOe |
| Reversible Temperature Coefficient 1) | α Br nom    | -0.100 ~ -0.120 | %/°C                  |      |      |
|                                       | β HcJ nom   | -0.58~ -0.66    | %/°C                  |      |      |
| material properties (typical values)  |             |                 |                       |      |      |
| Max. Operating Temperature 2)         | T max       | 120             | °C                    |      |      |
| Density                               | ρ           | 7.55            | g/cm <sup>3</sup>     |      |      |
| Permeability 20°C                     | μr          | 1.05            |                       |      |      |
| Vickers Hardness                      |             | 500 - 600       | HV                    |      |      |
| Modulus of Elasticity                 | E           | 150 - 200       | kN/mm <sup>2</sup>    |      |      |
| Copressive Strength                   |             | 1000 - 1100     | N/mm <sup>2</sup>     |      |      |
| Flexural Strength                     |             | 250             | N/mm <sup>2</sup>     |      |      |
| Expansion Coefficient                 |             | -               | 10 <sup>-6</sup> /K   |      |      |
| Expansion Coefficient in direction of | L           | -3 - 0          | 10 <sup>-6</sup> /K   |      |      |
| anisotropy                            | //          | 4 - 9           | 10 <sup>-6</sup> /K   |      |      |
| Specific Electric Resistance          | ρel         | 1.2 - 1.6       | μΩ <sup>·</sup> m     |      |      |
| Specific Heat Capacity                | С           | 440             | J/(kg <sup>-</sup> K) |      |      |
| Thermal Conductivity                  | λ           | 8.0 - 10.0      | W/m <sup>-</sup> K    |      |      |

<sup>1)</sup> The shown temperature coefficients are nominal reference values only . They can vary for different temperatures and don't need to be linear.

Note:

The above plotted graphs are idealized and represent theoretical values of the material. Shown are curves according nominal values based on uncoated material samples according to IEC 60404-5. Material and magnetic data represent typical data that may vary due to product shape, size and coating. Please contact Bomatec regarding specific requirements for your application.
